The purpose of this page is to provide resources in the rapidly growing area of computer-based statistical data analysis. This site provides a web-enhanced course on various topics in statistical data analysis, including SPSS and SAS program listings and introductory routines. Topics include questionnaire design and survey sampling, forecasting ...

2. Calculate the statistic using a Dirichlet draw to weight the data. Here is where, if you were doing a classical non-parametric bootstrap, you would use your resampled data to calculate a statistic (say a mean).

Statistical inference is the process of using data analysis to deduce properties of an underlying probability distribution. Inferential statistical analysis infers properties of a population, for example by testing hypotheses and deriving estimates.

In Bayesian statistical inference, a prior probability distribution, often simply called the prior, of an uncertain quantity is the probability distribution that would express one's beliefs about this quantity before some evidence is taken into account.

Story. Doing Data Science Exercises Without Data Cleaning and Coding. So as a data scientists/data journalist/information designer, who is about to teach university courses, I asked is it possible to teach and introductory level class that does not require first learning a lot about data cleaning and coding?
