Transcription and translation occur during interphase. They aren't related to DNA replication except indirectly - e.g., you have to transcribe mRNA for DNA polymerase, and translate it into protein in order to be able to replicate DNA.

Transcription and Translation? | Yahoo Answers

Translation: DNA To MRNA To Protein Nature.com Figure 1: A gene is expressed through the processes of transcription and translation. Cell Biology Cell Origins and Metabolism Proteins and Gene Expression Subcellular Compartments Cell Communication Cell Cycle and Cell Division

What Is Transcription And Translation In Biology Yahoo

Protein Synthesis: Transcription and Translation? I am writing a paper on protein synthesis and i have to include transcription and translation. Now i know there is DNA transcription and mRNA translation, but i don't think that that is the one i am suppose to be writing about.

Protein Synthesis: Transcription and Translation? | Yahoo

In molecular biology and genetics, translation is the process in which cellular ribosomes create proteins. In translation, messenger RNA (mRNA) is produced by transcription from DNA is decoded by a ribosome to produce a specific amino acid chain, or polypeptide.

Transcription and Translation? | Yahoo Answers

Transcription is the process where DNA is converted to RNA. It is called transcription because you are mostly copying the message over (you get the same number of bases, but DNA is made of A T C G and RNA is made of A U C G). Translation is when the RNA is used to assemble the protein. Here the cell must translate the RNA message of bases (As, Cs, Us, and Gs) to different amino acids. Three ...

Transcription Worksheet Biology Answer Key - Medical

Transcription is the process of making an RNA copy of a gene sequence. This copy, called a messenger RNA (mRNA) molecule, leaves the cell nucleus and enters the cytoplasm, where it directs the synthesis of the protein, which it encodes.

National Human Genome Research Institute (NHGRI)

In addition, the processes of transcription and translation are divided in eukaryotes between the nucleus (transcription) and the cytoplasm (translation), which provides more opportunities for the regulation of gene expression.
